How does SkuVault benefit you?

SkuVault assists operations and logistics managers by reducing warehouse overhead, streamlining the picking process, and automating inventory procedures. Because SkuVault is remotely sured and cloud-based, you can access it from any location or device and there's no expensive hardware to purchase or lengthy installation process.

1. Sell on every platform and never have an out-of-stock.

SkuVault has quantity buffers to ensure you never sell out of product, regardless of how many channels you sell on. Now you can take advantage of every channel without the headache. SkuVault provides total inventory quantities so you can track what's inbound to Amazon, what's in transfer between their warehouses, and what's in stock-- all within SkuVault. You can also use sales reports to see what's been sold via FBA.

2. Reduce mistakes, waste, and costs.

With built-in quality control measures to ensure you get the right product to the right person you'll see fewer miss-ships, miss-picks, and warehouse errors. Not only does it mean happier customers, but lower labor, shipping, and product costs. Some businesses saw as much as an 87% reduction in fulfillment time which equated to a 30% reduction in labor cost.

3. Every inch of your warehouse should work for you.

You can make the most use out of your warehouse space by placing items wherever they fit, with our dynamic location feature. Because our picklists are location-based, your pickers will always be on the fastest, most efficient path to picking. Which means less back-and-forth and more picking.
